EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Clint J. Feekes on 6/9/2005.

The application has been amended as follows:

- I. Cancel claims 1-2, 10-12 and 19-20; and
- II. Replace claims 3, 13 and 21 with the following:

3. A computer implemented method for hosting a legacy user interface object originally intended for use in a windows-based legacy window manager in a windows-based new window manager, comprising:

providing a software bridge between said legacy window manager and said legacy user interface object that allows said legacy user interface object to operate in a computer that includes said new window manager and said legacy window manager;

intercepting a message at said software bridge intended for said legacy user interface object;

Art Unit: 2194

determining whether said message should be forwarded to said legacy window manager;

in response to determining that said message should be forwarded to said legacy window manager, forwarding said message to said legacy window manager; and

in response to determining that said message should not be forwarded to said legacy window manager, forwarding said message to a procedure originally intended to handle said message and wherein forwarding said message comprises causing said message to be transmitted to a root user interface object hosted in a window tree maintained by said new window manager.

13. A computer implemented method for hosting a legacy user interface object originally intended for use in a windows-based legacy window manager in a windows-based new window manager, comprising:

providing a software bridge between said legacy window manager and said legacy user interface object that allows said legacy user interface object to function in a computer that includes said new window manager and said legacy window manager;

intercepting a message at said software bridge intended for said legacy user interface object;

determining whether said message should be forwarded to said new window manager;

Art Unit: 2194

in response to determining that said message should be forwarded, forwarding said message to a root user interface object hosted in a window tree maintained by said new window manager;

routing said message from said root user interface object down said window tree to an adapter control associated with said legacy user interface object;

processing said message at said adapter control;

forwarding said message from said adapter control to a procedure originally intended to handle said message;

routing said message from said adapter control to a listener object attached to said adapter control;

determining whether said message has been completely handled; and

in response to determining that said message has not been completely handled, routing said message from said adapter control up said window tree maintained by said new window manager so that parent objects of said adapter control in said window tree may process said message.

21. A computer-readable medium having computer executable instructions that when executed on a computing device carries out a computer implemented method for hosting a legacy user interface object intended for use in a legacy window manager in a windows-based new window manager, comprising:

Art Unit: 2194

providing a software bridge between said legacy window manager and said legacy user interface object that allows said legacy user interface object to operate in a computer that includes said new window manager and said legacy window manager;

intercepting a message at said software bridge intended for said legacy user interface object;

determining whether said message should be forwarded to said legacy window manager;

in response to determining that said message should be forwarded, causing said message to be transmitted to said legacy window manager;

in response to determining that said message should not be forwarded to said legacy window manager, forwarding said message to a procedure originally intended to handle said message and wherein forwarding said message comprises causing said message to be transmitted to a root user interface object hosted in a window tree maintained by said new window manager.
